+ + +

A family carer is someone who cares for a friend, family, whānau or āiga member with a disability, health condition, illness or injury who needs help with everyday living. We can all expect to give or receive family care during our lives.

24%

of young carers aged under 35 have the lowest physical wellbeing of all carers and the highest levels of depression and anxiety.

## 1m+

Carers NZ estimates Aotearoa's overall population of family carers to be 1m+ based on global demographic evidence. More than a billion people act as family carers for loved ones worldwide.

# \$1.5b

Family carers who aren't able to participate fully in paid employment lose \$1.5b in revenue per year. Two thirds of this revenue is lost by female carers. 51% of this is lost by carers who can't work at all, the remainder by carers who work fewer hours than other New Zealanders due to their caring role.

78%	of family carers are European
17%	are Maori
7%	are of Pacific ethnicities
7%	are of Asian ethnicities
